Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. Extensions of time may be available under the provisions of 37 CER 1.136(a). In no event, however, may a reply be timely filed after SIX (8) MONTHS from the mailing date of this communication. If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (8) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any repty received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). DETAILED ACTION

CLAIMS PRESENTED

Claims 1-33 are presented.

CLAIM REJECTIONS

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over SMIL (Synchronized Multimedia Integration Language (SMIL) 1.0 Specification, W3C Recommendation 15-June-1998, available at http://www.w3.org/TR/REC-smil/) and IEEE (Echiffre, M., Marchisio, C., Marchisio, P., Panicciari, P., and Del Rossi, S. 1998. MHEG-5— Aims, Concepts, and Implementation Issues. *IEEE MultiMedia* 5, 1 (Jan. 1998), 84-91).

The subject matter of this patent application is noted at the title of this application and pages 1-8. At page 8, Applicant noted the limitations of SMIL 1.0. The problems noted at page 8 were already noted and discussed (as noted in the survey paper of IEEE, which is relied and cited in the rejections section). Indeed, actual standards have

already existed for event handlings. IEEE, among others, noted MHEG-5. This standard was already well known to be used with in the context of Web browsers. See IEEE, section MHEG-5 runtime engine, the first paragraph, which discusses the relationships between Web browsers and MHEG-5. Because SMIL are XML 1.0 documents which explicitly work with Web browsers, both of the references and the subject matter of this patent application are in the same field of endeavor.

Regarding claim 1, SMIL teaches "An XML-based ... marker comprising an ... parameter indicating an ..., wherein the marker represents a function to detect the indicated (section 1. Specification Approach, the first sentence which discusses XML and refers to terms defined in XML 1.0)."

These passages of SMIL do not teach "event" in the sense of the claim.

IEEE teaches "event (section MHEG-5 overview, the first paragraph which discusses event, action") for the motivation of having easier user control (section MHEG-5 overview, the third paragraph which discusses user control and navigation features).

Hence, it would have been obvious to those of ordinary skill in the art at the time of the claimed invention to combine teachings of SMIL and IEEE for the motivation noted in the previous paragraphs so as to teach the claimed invention.

Claims 1, 5, 8, 9, 10, 16, 21, 24, 29, 30, 32 are independent claims.

الله المري المجهورة الأما

Claims 5, 8, 9, 10, 16, 29, 30, 32 deal with various attribute handlings. See IEEE, section Major MHEG-5 classes, the first paragraph, which discusses attributes in the context of events, actions, and objects.

Application/Control Number: 10/777,119

Art Unit: 2134

Claims 21, 24 deal with various interpolate (indication of time and value changes over time). See SMIL, section 4.2 Synchronization Elements, which discusses indication of time and value changes over time. In particular, note the par element (parallel time handling) and the seq element (sequential time element).

Claims 2-4, 6-7, 11-15, 17-20, 22-23, 25-28, 31, 33 are dependent claims.

Claims 2-4 11-12, 15, 17-20, 22-23, 25-28 deal with various event handlings.

See IEEE, section Major MHEG-5 classes, the first paragraph, which discusses attributes in the context of events, actions, and objects.

As noted in IEEE, MHEG-5 was especially created for such various event handlings because such features were particularly in demand at the time of the creation of MHEG-5.

Claims 6-7, 13-14, 31, 33 deal with various synchronization and time handlings.

See SMIL, section 4.2 Synchronization Elements, which discusses indication of time and value changes over time. In particular, note the par element (parallel time handling) and the seq element (sequential time element).

As noted in SMIL, the SMIL specification (which is referred in the very title of this patent application) was specially created for such media handlings which necessarily involves such various synchronization and time handlings.

Conclusion

The art made of record and not relied upon is considered pertinent to applicant's disclosure. The art disclosed general background.
